Complex works

Hooks in the Claude Ecosystem

Hooks let you run custom logic at key points in Claude's workflow.

Hooks = Extend Claude with your code

Automate tasks, enforce rules, integrate with tools, and shape Claude's behavior around your needs.

Claude code

Where Hooks Fit

Workflow

Common Hook Types

Pre-Tool Use Hook

Inspect or modify Claude's request before a tool is used.

Use cases:

- Validate input
- Add context
- Enforce policies

Post-Tool Use Hook

Inspect or transform results after a tool is used.

Use cases:

- Format results
- Log and audit
- Enrich data

Stop Hook

Run logic after Claude's response is ready.

Use cases:

- Final checks
- Log conversations
- Trigger workflows

Example Use Cases

Safety & Guardrails
Block or warn on risky content before tools are called.

Data Enrichment
Fetch additional data and add it to Claude's context.

Logging & Analytics
Capture events and measure usage across conversations.

Workflow Automation
Trigger actions in your systems based on Claude's responses.

Key Benefits

- ✓ Extend Claude without changing the core
- ✓ Keep control and visibility
- ✓ Integrate with your tools and workflows
- ✓ Build reliable, production-ready AI experiences

Plugins in Claude Code Ecosystem

Exa, Github

Plugins extend Claude Code with built-in integrations for tools, services, and workflows.

Pre-built Integrations

Use community and official plugins to connect Claude Code with the tools you already use.

Secure & Sandboxed

Plugins run in a controlled environment with explicit permissions.

Productive by Default

Automate common tasks, reduce context switching, and ship faster.

Composable

Combine multiple plugins in a workflow to build powerful development experiences.

What is a Plugin?

A plugin is a packaged integration that provides tools, resources, or capabilities to Claude Code through a standard interface.

Plugin Capabilities

- Provide tools (APIs, CLIs, SDKs)
- Access external services & data
- Read / write files and resources
- Trigger workflows & automations
- Return results for Claude to use

Examples

- GitHub**
Manage repos, issues, pull requests, and more.
- Slack**
Send messages, read channels, and manage conversations.
- Notion**
Search, create, and update pages and databases.
- AWS**
Interact with AWS services and resources.

...and many more from the community!

How Plugins Work

Example: Get latest issue from GitHub

Where Plugins Fit in Claude Code

Benefits

- Extends Claude Code without reinventing the wheel
- Leverages best-in-class tools and services
- Saves time and reduces errors
- Build on community plugins or create your own

Create Your Own Plugin

Build custom plugins to fit your needs.

Skills in the Claude Code Ecosystem

Skills let Claude Code perform complex, multi-step tasks consistently and reliably.

Reusable Expertise

Encapsulate proven workflows and best practices.

Consistent Results

Deliver reliable outcomes by following defined steps and context.

Composable

Use alone or combine with hooks and plugins for powerful automations.

Share & Collaborate

Share skills across your team or the community.

How Skills Work

Example: Create API with tests and docs

Where Skills Fit in Claude Code

Benefits

- Accelerate development with repeatable workflows
- Reduce errors and improve code quality
- Standardize processes across your team
- Build institutional knowledge that scales

Create Your Own Skill

What is a Skill?

A Skill is a reusable, versioned collection of instructions, resources, and examples that teaches Claude Code how to complete a specific type of task.

Skill Capabilities

- Solve complex, multi-step problems
- Follow best practices and standards
- Use tools, plugins, and resources
- Access and generate files
- Return structured outputs
- Maintain consistency across projects

Examples of Skills

- API Scaffolder**
Create production-ready APIs with routes, validation, and error handling.
- Test Writer**
Generate unit and integration tests with good coverage.
- Doc Generator**
Create concise, well-structured documentation.
- Code Reviewer**
Review changes for bugs, security, and best practices.
- Database Migrator**
Generate and run safe database migrations.

...and many more from the community!
